

our customers.

**Q:** Does your company have any other exciting things "up its sleeve"?

**A:** Yes, our IBES (Integrated Building Energy Eco-System) represents MultiMode's focus in the area of sustainable home energy. IBES consists of an array of on-property renewable energy generation products and energy-efficient home appliances, coupled together with a home energy monitoring system. With IBES, any person can create a home that provides Independent Energy for all the needs of the family.

Our first IBES product will be a solar panel package for your home that will allow you to recharge your Dagne directly, thereby providing you with home-based transportation energy independence.

**Q:** Exciting! Anything else we should know about?

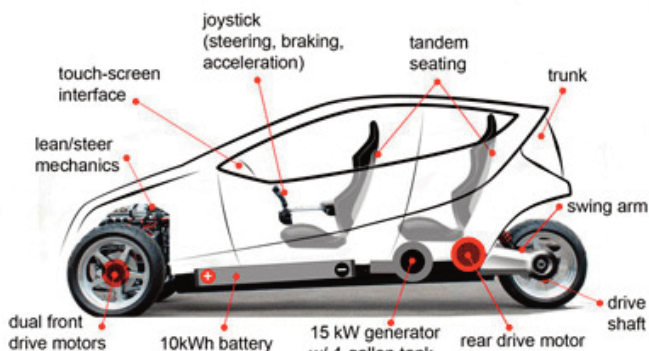

**A:** Actually, yes. ANNMA (Agricultural Neighborhood Network with Motive Aid) is the branch of MultiMode Technologies devoted to sustainable food distribution. ANNMA is an online resource that creates a marketplace for part time food growers, connects consumers with local sources of food, and provides a convenient food distribution and delivery system. ANNMA provides families and communities with an affordable, dependable food supply.

We are currently building the foundation of ANNMA through our research on sustainable food distribution models. We plan to launch ANNMA soon after the launch of Dagne.

Also, MultiMode Opportunities is another branch of MultiMode focused on education and outreach. The current focus of MultiMode Opportunities is our Human-Powered Generator (HPG). We employ the HPG at schools and public events to teach students about energy-efficient home appliances, energy efficient vehicles, and local food choices. The HPGs have been popular wherever we take them and are effective tools for communicating core concepts.

In the future, MultiMode Opportunities will fund educational projects in response to third-party proposals, supporting the spirit of Independent Energy in individuals to transform their own communities into a state of Independent Energy.

*This information comes directly from [www.revolutionmotors.biz](http://www.revolutionmotors.biz) and two of the many wonderful powerhouses that have driven the development and production of this amazing transportation miracle: Ben Werner, the visionary CEO of Multimode Technologies and Revolution Motors and Eric Sandoz, who is busy engineering something probably even as we speak. They may also be able to answer other questions about safety as compared to a regular car or maybe a motor-cycle; driving in winter-weather, such as snow; the change-over from the familiar steering-wheel to a joy-stick for those of us who were not raised on them; or any other concerns you might have. ## KEEP The BEET Media Star here, the World's First Talking Beet Plant, also known as Miss BEET!

It gives me a lot of joy to see that more and more of us are gaining confidence that we can grow our own food. The word is out...it really isn't that difficult. Here is a little reminder: One of the simplest ways to see the miracle of food growing before your very eyes in about a week or less is to get the largest locally grown beet you can find - preferably from a local organic farmer. Give it some good organic compost, good food, the way you would feed your pet. Did any of you go and adopt your own beet from the local market yet?

Remember, you are supposed to eat the greens, but KEEP The BEET. Do not eat it, it will be your friend. Your very own KEEP The BEET will keep growing more and more greens. You can eat the greens raw, steamed, or in various recipes. At home here in the *Enchanted Garden Intentional Community* in San Diego, California, Leslie has more than ten pots of beets. I do not mind sharing my pot with edible flowers, or other sprouts either, which means more nutrition for you. During the second year, I will send out a large stalk and make hundreds of seeds. Then you can grow beets from seeds as well, share them with friends or trade them. Seeds have always been a real currency.

**SOL:** Miss BEET, how did you learn to talk?

**KEEP The BEET:** All plants talk. The question is: Are you hearing me? Learning to "Talk Beet" is a question of learning how to keep the beat with nature. For thousands of years, we have each had natural abilities. That is why everyone is so drawn to Anastasia. She never lost what we all inherently have. When you start to keep your own beet in a pot, you will start to hear it and you will remember how to keep the beat with your own nature.

**SOL:** You mentioned the Enchanted Garden. What is that?

**KEEP THE BEET:** The Enchanted Garden is a name for our renewed earth that grows one plant at a time, and one dream at a time. Mother Earth is looking to each of us for her rebirth. We each have Seed Dreams that are meant to come down to earth. Growing our dream begins in our own backyard, so dig in. (The *Enchanted Garden* is also the name of our own intentional community.)

**Q:** Miss Beet, I understand you can answer relationship questions. My name is Molly. My boyfriend Bill loves city life and I am excited by the idea of life in the country. He says he wants to get married and have children, but only if I move into his Los Angeles condominium with him. What should I do?

**M.B.:** My dear Molly! That sure sounds like a dilemma. Look at how many things you and Bill have in common. Do you have mutual beliefs regarding children, family life and work out on your land? Why don't you tell him that you went to talk to...ehm...get advice from a plant and see what he says. You will find out very quickly whether he is rooted in your reality or over the top with his life-style. If he is curious and asks you more questions, he is a good listener. That is important. Make sure he loves gardening. A man who loves flowers will appreciate a woman. It's not so much city or country, but whether he will honor who you are and respect your needs and wonderful connection to the plant-kingdom. After all, if you cannot share the blessings of Nature, what CAN you share? *I'm rooting for you!*
